

I am an XM Radio customer and have been for over 3 years. I travel extensively as I have children in the armed services in Wyoming and Florida. I chose XM Radio because of the services they provide to me as a subscriber, including traffic and weather reports. I live in the Upper Peninsula of Michigan so almost any destination is a considerable drive. I absolutely support XM Radio and the services they provide. I pay a monthly fee, gladly I might add, to receive those services. I oppose any intervention by any entity to limit XM Radio's ability to provide those services. I urge the FCC officials to resist imposing any prohibitive regulations on XM Radio's ability to provide those services that they currently send to my receiver by satellite.
